Mathematics

General Instructions

- Reading time 5minutes
- Working time 3 hours
- Write using black or blue pen
- Board approved calculators may be used
- on the last page A table of standard integrals is provided
- All necessary working should be shown in every question

Total marks (120)

Attempt Questions 1 – 10

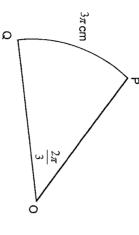

All questions are of equal value

This paper MUST NOT be removed from the examination room

Question 1

- (a) Evaluate correct to 3 significant figures: $\frac{\pi}{e^3}$.
- **b** Solve 7-3x < 5 and graph your solution set on a number line.
- <u>©</u> $\sqrt{3}-2$ $-\sqrt{3+2}$ in its simplest form.

Not to Scale

arc is 3π centimetres and angle POQ is $\frac{2\pi}{3}$ radians. Find the radius of the circle. In the diagram above, PQ is an arc of a circle, centre O. The length of the

(e) The length of the line joining the points A (a,-2) and B (3,-7) is $5\sqrt{2}$ units Find all possible values of a.

2

 \mathfrak{B} Solve the simultaneous equations;

$$2x - y = 7$$
$$x + 3y = 0$$

Marks

(a)

Question 2

Start a new page

Marks

Differentiate:

 Ξ x^2e^{3x} Ξ

 $(2x^3-5)^7$

(iii) $\frac{x}{x \operatorname{nis}}$

On the same number plane draw the graphs of:

b

$$y = \sqrt{4 - x^2}$$
 and $y = |x|$

Shade in on your graph, the region where $y \le \sqrt{4-x^2}$ and $y \ge |x|$ hold simultaneously

<u>o</u> Find the values of a and b. point is parallel to the line y = 2x - 6. The curve $y = ax^3 + bx$ passes through the point (1,7). The tangent at this

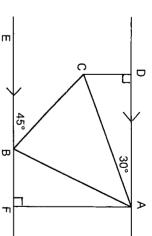

- Ξ $sec^2 7x$
- Ξ $\frac{x^2}{x^3+3}$
- (b) (i) On the same diagram draw graphs of the functions $y = x^2$ and y = 5 - 4xshowing all intercepts with the x and y- axes.
- Ξ Show that the graphs intersect at x = 1 and x = -5
- (iii) Hence find the exact area bounded by the two functions
- <u></u> Evaluate:
- Ξ
- Ξ $\int_0^3 \cos(2x+\pi) dx$

Question 4

Start a new page

Marks

(a)

In the diagram above AC = AB and DA is parallel to EF. Angle DAC = 30° and angle CBE = 45° . CD is perpendicular to DA and AF is perpendicular to EF.

Copy or trace the diagram onto your working paper.

- Ξ Find the size of angle ACB, giving reasons
- Ξ Hence find the size of angle CAB
- Ξ Prove that $\triangle ACD \equiv \triangle ABF$.
- **E** A set of packing crates has been designed each in the shape of a rectangular prism. When empty, each crate packs inside the next sized crate. The largest which are half those of the preceding one. one is 1 metre by 1 metre by 0.5 metres. Each succeeding crate has dimensions crate is 2 metres long by 2metres wide by 1 metre high. The crate inside this
- Ξ Write down the dimensions of the third largest crate.
- Ξ Calculate the maximum possible total volume for the complete set.
- <u></u> For the parabola: $(y-1)^2 = 8(x+2)$
- State the coordinates of the vertex and the focus.
- Ξ Sketch the graph of the parabola showing the above.
- Ξ Write down the equation of the axis of symmetry

Not to Scale

y = g(x)

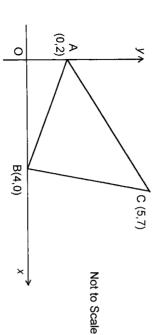

4

5

y = f(x)

area enclosed by the two curves are shown. Using Simpson's Rule, find an approximate value for the In the diagram above, the graphs of the functions y = f(x) and y = g(x)

(

Copy the diagram onto your worksheet The diagram shows the points A (0,2), B (4,0) and C (5,7)

- Ξ Find the coordinates of M, the midpoint of AB
- Ξ Show that the gradient of AB is -
- (iii) Find the equation of the perpendicular bisector of AB
- (IV) Show that the perpendicular bisector of AB passes through C.
- 3 What type of triangle is ABC? (Give a reason for your answer)
- <u>@</u> Solve: $2^{2x} - 15(2^x) - 16 = 0$

Question 6

Start a new page

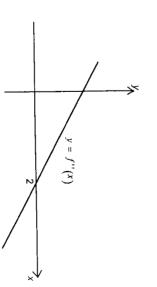

Marks

- (a) Consider the curve $y = x^3 + 4x^2 - 3x$.
- Ξ Show that the gradient of the curve at x = 1 is 8.
- Ξ Hence find the equation of the normal at x = 1
- **(** to catch the train to get to work. Her new boss says that she cannot be late on Janice lives in Springwood and is starting a new job in Parramatta. She needs the first two days of her new job or she will lose it. The probability that her train arrives on time is 0.95.
- What is the probability that Janice's train is late on the first day?

 Ξ

- Ξ What is the probability of the train being late on the first two days?
- (Ξ) What is the probability of Janice keeping her job?
- (IV) What is the probability that Janice arrives late on exactly one of the first three days of her new job?

<u></u>

of the function y = f(x). Given that f(2) = 0 and f'(1) = 0, draw a possible sketch of the function y = f(x)The diagram above shows the graph of the y = f''(x), the second derivative

Consider the sequence : a, 3a-1, 5a-2,...

a

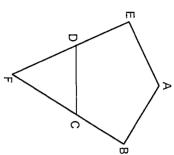

- Ξ Find the twentieh term
- Ξ Find the sum of the first twenty terms.

Not to Scale

ABCDE is a regular pentagon. BC and ED are produced to meet at F.

Copy or trace the diagram onto your working paper

- Ξ Show that the size of each internal angle in the pentagon is 108°
- Ξ Show that triangle FCD is isosceles.
- (iii) Prove that triangle FCD is similar to triangle FBE
- (iv) If the sides of the pentagon are each 5 centimetres and BE = 8 centimetres, determine the length of CF.
- **6** For the curve represented by the equation $y = x^3 + 3x^2 - 1$
- \odot Find $\frac{dy}{dx}$.
- Find all stationary points and determine their nature.
- Ξ Ξ Sketch the curve in the domain $-3 \le x \le 2$, showing the above information.

- (a) A particle is moving along the x-axis. The distance of the particle, x metres, from the origin O is given by the equation $x = 6t + e^{-4t}$, where t is the time in seconds.
- Ξ What is the position of the particle when $t = \frac{1}{2}$?
- Ξ velocity. Write down an expression for the velocity of the particle and find the initial
- (iii) Show that the initial acceleration of the particle is 16 cm/sec²
- (iv) Explain why the particle will never come to rest

(b) Given that
$$\cos \alpha = -\frac{5}{\sqrt{29}}$$
 and $\tan \alpha < 0$, find the value of $\cos ec\alpha$

(c) (i) Sketch the graph of
$$y = \cos 2x$$
, for $0 \le x \le \pi$

(iii) Find all values of x for
$$0 \le x \le \pi$$
, such that $2\cos 2x = 1$

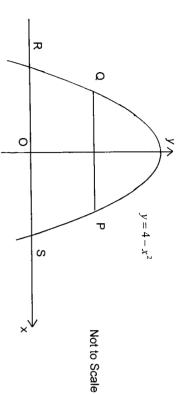

Question 9

10

Marks

(a)

parabola in the first quadrant. Q also lies on the parabola such that PQ is parallel The parabola $y = 4 - x^2$ cuts the x-axis at R and S. The point P (x,y) lies on the

- Ξ Write down the coordinates of R and S.
- Ξ Show that the area of trapezium PQRS is given by:

$$A = \left(2 + x\right)\left(4 - x^2\right)$$

- (iii) Hence find the value of x which gives a maximum value of A, justifying your answer
- 9 The size of the population, P, of a colony of whiteants after t days is given by the equation $P=3000e^{kt}$
- Ξ What was the initial size of the colony?
- Ξ correct to 2 decimal places. If there are 4000 whiteants in the colony after 1 day, find the value of k
- Ξ What is the size of the colony after 2 days?
- (F When will the colony quadruple in size? (Answer to the nearest day)

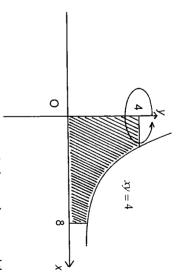

Question 10

Marks

=

(a)

and x = 8, is rotated about the y-axis. The area enclosed by the curve xy = 4, the x and y-axes and the lines y = 4

Show that the volume of the solid of revolution obtained is given by:

2

 Ξ

$$V_{y} = 32\pi + \pi \int_{\frac{1}{2}}^{4} \frac{16}{y^{2}} \, dy$$

- Ξ Hence find the volume of the solid
- Given the quadratic equation $3x^2 5x + 6 = 0$

9

- Ξ Find the value of the discriminant
- Ξ Explain the nature of the roots of the equation $3x^2 - 5x + 6 = 0$.
- <u>O</u> will need \$1 000 000 if he is to retire in 20 years time and maintain his present Michael has decided to invest in a superannuation fund. He calculates that he investments. lifestyle. The superannuation fund pays 12% per annum interest on his
- Michael invests \$P at the beginning of each year. Show that at the end of the first year his investment is worth \$P(1.12).
- Show that at the end of the third year the value of his investment is given by the expression $P(1.12)(1.12^2 + 1.12 + 1)$.

 Ξ

 Ξ

(ii)Find a similar expression for the value of his investment after 20 years and required for his retirement. hence calculate the value of P needed to realise the total of \$1 000 000
