PM TUESDAY 1 AUGUST

100 copies

TIME ALLOWED: TWO HOURS
[Plus 5 minutes reading time]

DIRECTIONS TO STUDENTS:

- Write your Barker Student Number on EACH AND EVERY page.
- Students are to attempt ALL questions.
 ALL questions are of equal value. [12 marks]
- The questions are not necessarily arranged in order of difficulty.
 Students are advised to read the whole paper carefully at the start of the examination.
- ALL necessary working should be shown in every question.
 Marks may be deducted for careless or badly arranged work.
- Begin your answer to each question on a NEW page. The answers to the questions in this paper are to be returned in SEVEN SEPARATE BUNDLES.
 Write on ONLY ONE SIDE of each page.
- Approved calculators and geometrical instruments may be used.
- · A table of Standard Integrals is provided at the end of the paper.

QUESTION 1.

(a) Solve for x:

(i)
$$\frac{x+4}{x-2} > 5$$
 [3m]

- 2 -

(ii)
$$\left(x + \frac{1}{x}\right)^2 - 5\left(x + \frac{1}{x}\right) + 6 = 0$$
 [3m]

(b) Differentiate with respect to x:

(i)
$$\cos^3 2x$$
 [2m]

$$e^{x \ell n x}$$
 [2m]

(c) AB is a variable interval. M and N divide AB in ratio -2:1 and 2:1 respectively. Draw a diagram and decide in what ratio B divides MN.

QUESTION 2.

(a) Evaluate:
$$\lim_{x \to 0} \frac{\sin 5x}{2x}$$
 [2m]

(b) (i) Sketch the curve $y = \sin^{-1}(2x)$

(c) Evaluate:
$$\int_0^2 \frac{4}{\sqrt{4-x^2}} dx$$
 [3m]

(d) Find the obtuse angle, to the nearest minute, between the lines

$$3x - 4y + 8 = 0$$
 and $x + 2y + 1 = 0$ [4m]

QUESTION 3.

(a) Prove:
$$\frac{\sin \theta + \sin 2\theta}{1 + \cos \theta + \cos 2\theta} = \tan \theta$$
 [3m]

(b) By using the substitution
$$u = \cos x$$
, or otherwise, evaluate $\int_0^{\frac{\pi}{2}} \tan x \, dx$ [4m]

(c) If
$${}^{\circ}C_4 + {}^{\circ}C_5 = {}^{10}C_m$$
, find the value of m .

- (d) Find the derivatives of:
 - (i) $\ell n(\sec 3x)$

(ii)
$$\tan^{-1}(2\tan x)$$
 [4m]

QUESTION 4.

- (a) $P(4p, 2p^2)$ is a point on the parabola $x^2 = 8y$ and S is the focus. The tangent to the parabola at P meets the y-axis in M. The perpendicular from the focus S to the tangent PM meets the tangent in N.
 - (i) Write down the equation of PM and hence show that M has coordinates $(0, -2p^2)$.
 - (ii) Write down the equation of SN and hence find the coordinates of N. [4m]
 - (iii) Find the coordinates of the midpoint of the interval MN. [1m]
 - (iv) Find the equation of the locus of the midpoint MN as P varies. [1m]
- (b) Use the binomial theorem to find the term in x^5 in the expansion $(1 + 2x)^8$. [2m]
- (c) Give the exact value of $\cos^{-1} \left(\sin \frac{4\pi}{3} \right)$.

QUESTION 5.

(a) Prove, by mathematical induction, that $3^{2n} - 1$ is divisible by 8 for all positive integers.

[3m]

(b) Rain is falling steadily and is collected in an inverted right cone so that the volume collected increases at a constant rate of $5 \text{ cm}^3/\text{h}$. If the radius r cm of the surface of the water is one third its depth, y cm, find the rate in cm/h at which the depth is increasing when y = 3.5.

[5m]

(c) Find all angles θ with $0 \le \theta \le 2\pi$ for which $\cos 2\theta = \cos \theta$.

[4 m]

QUESTION 6.

(a) Find the term independent of x in the expansion of $\frac{1}{x} \left(3x - \frac{1}{2x} \right)^7$.

[3m]

(b) A particle moves in a straight line and its position at any time t is given by:

$$x = 2\cos 3t - 5\sin 3t.$$

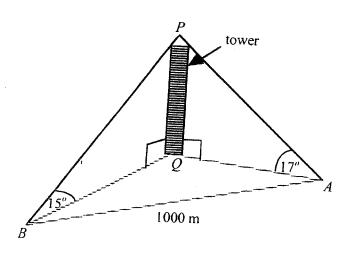

- (i) Find the acceleration in terms of position and hence show that the motion is simple harmonic.
- (ii) Find the greatest speed of the particle.

[5m]

- (c) Show that $\frac{d}{dx} \left[e^x \left(\sin x + \cos x \right) \right] = 2e^x \cos x$. [4m]
 - (ii) Hence, evaluate: $\int_{1}^{\frac{\pi}{2}} e^{x} \cos x \, dx$ (correct to 3 significant figures). [4m]

QUESTION 7.

(a)

The angle of elevation of a tower PQ, of height h metres, at a point A due east of it, is 17°. From another point B, the bearing of the tower is 061"T and the angle of elevation is 15°. The points A and B are 1000 metres apart and on the same level as the base Q of the tower.

- (i) Show that $\angle AQB = 151^{\circ}$.
- (ii) Consider the $\triangle APQ$ and show that $AQ = h \tan 73^{\circ}$.
- (iii) Find a similar expression for BQ.
- (iv) Calculate h, using the cosine rule, in the $\triangle AQB$. (Answer to nearest metre).

[6m]

- (b) A cricket ball is projected from the ground with an initial velocity of $30 \,\mathrm{ms^{-1}}$ at an angle of 40° to the horizontal. The equations of motion taken in the horizontal and vertical directions are $\ddot{x} = 0$, $\ddot{y} = -10$. (Use $g = 10 \,\mathrm{ms^{-2}}$).
 - (i) Calculate the greatest height reached by the ball.
 - (ii) What is the speed of the ball at the greatest height?
 - (iii) How high is it after the ball has travelled 40 metres horizontally?

[6m]
