## SCEGGS Darlinghurst

2004 Higher School Certificate Triel Examination

## Mathematics Extension 1

This is a TRIAL PAPER only and does not necessarily reflect the content or format of the Higher School Certificate Examination for this subject.

## General Instructions

- Reading time ~ 5 minutes
- Working time 2 hours
- Write using black or blue pen
- Board-approved calculators may be used
- A lable of standard integrals is provided at the back of this
- All pecessary working should be shown in every question

## Total marks - 84

- Afternpl Questions I-7
- All questions are of equal value

BLANK PAGE

Total unrits – 84 Attempt Questions 1–7 All questions are of equal value

Answer each question on a NEW page

Question 1 (12 marks)

Marts

(a) Solve for x;

$$\frac{3}{x-2} \le 1$$

- Find, to the nearest minute, the acute angle between the lines y = 4x + 5and 3x + 2y - 1 = 0. €
- # 28 ↑ \* <u>.</u>E Ē ତ
- (d) Evaluate  $\int_0^2 \sin^2 3x \, dx$
- (c) Evaluate  $\int_{a}^{1} x (1-x)^{3} dx$  using the substitution u = 1-x.

Question 2 (12 marks) START A NEW PAGE

Marks

- Differentiate  $x^2 \sin^{-1} 3x$  with respect to x. 3
- How many different armagements of the letters of the word PARABOLA are possible? Ē
- Find all real values of a for which  $P(x) = \alpha x^3 8x^4 9$  is divisible by x = a. 3
- The two curves  $y = \cos^{-1} x$  and  $y = 2 \tan^{-1} (1 x)$  both cut the y-axis at the point  $\left(0, \frac{\pi}{2}\right)$ . Both curves also share a contraon tangent at  $\left(0, \frac{\pi}{2}\right)$ . Find the equation of this tangem. ਉ

E

Not to scale

OA and OB are perpendicular, AY and XB intersect at Z. O is the centre of a semicircle, diameter XY.

Copy the diagram outo your answer sheet.

- (i) Exploin why ZAY8 = 45°.
- (ii) Prove that BY = BZ

Higher School Certificate Trail Exprension, 2004 Methorsatics Extension 1

Question 3 (12 marks) START A NEW PAGE

Express  $\sqrt{3}\cos x - \sin x$  in the form  $R\cos(x + a)$  where R > 0 and  $0 < \alpha < \frac{\pi}{2}$ . 8 3

(ii) Hence, sketch the graph of the equation  $y = \sqrt{3}\cos x - \sin x$  for

$$\frac{-\pi}{6} < x < 2\pi$$

(iii) Solve the equation  $\sqrt{3}\cos x - \sin x = \sqrt{2}$  for  $0 \le x \le 2\pi$ .

(b) On a particularly windy day, a sock pegged on a clothes line is oscillating in simple harmonic motion such that its displacement, x centimetres, from the origin, O, is given by the equation:

" x = -16x where t is the time in seconds.

Show that  $x = a \cos(4t + \alpha)$ , where a and  $\alpha$  are constants, is a solution of motion for the sock. Ξ

(ii) Initially, the sock is 5cm to the right of the origin with a velocity of -4cms<sup>-1</sup>. Show that the amplitude of the oscillation is  $\sqrt{26}$  cm.

(iii) Find the maximum speed of the sock.

Prove that 5" + 11 is divisible by 4 for all integers  $n \ge 0$ , by mathematical Ξ

Question 4 (12 marks) START A NEW PAGE

Mark

: }

Marks

(a) Consider the function 
$$f(x) = \pi + 2 \sin^{-1} \left( \frac{x}{t} \right)$$

(i) State the domain and range of 
$$y = f(x)$$
.

(ii) Sketch the graph of 
$$y = f(x)$$
, marking clearly any endpoints.

(b) Two roots of the equation 
$$x^2 + px^2 + q = 0$$
 (p, q real) are reciprocals of each other.

(i) Show that the third root is equal to 
$$-q$$
.

(ii) Show that 
$$p = q - \frac{1}{q}$$
.

A forklift is driving down a warehouse siste. The acceleration of the forklift is given by the equation: 3

$$x = -\frac{1}{2} \mu^2 e^{-z}$$

where x is the displacement from the origin and  $\mu$  is the initial velocity at the origin.

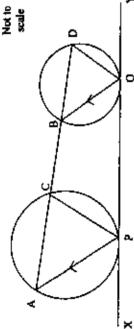

(i) Show that 
$$v^2 = 4e^{-t}$$
 if  $\mu = 2ms^{-t}$ .

(iv) Describe the motion of the particle as 
$$t \to \infty$$
.

AD is a straight line, cutting one circle at A and C and the other circle at B and D. AP is a chord in one circle and BQ, a chord in the other circle, is gatallel to AP. In the diagram, XY is a common tangent to two non-intersecting circles. This tangent touches one circle at P and the other circle at Q.

Copy the diagram onto your answer sheet.

Prove that:

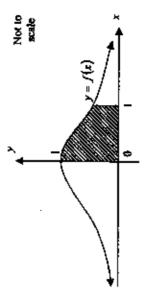

PC 00 ε

- (ii) PQBC is a cyclic quadrilateral.
- The equation of the tangent to the parabola  $y = x^2$  at the point  $P(y, t^2)$  is  $y=2tx-t^3$ . €
- Show that the line passing through the focus of the parabola, perpendicular to this tangent, has equation  $y = \frac{t - 2x}{4t}$ ε
- Show that the foot of the perpendicular from the focus to the tangent is the point  $F\left(\frac{t}{2},0\right)$ . Ξ
- (iii) Find the locus of M, the midpoint of PF.

Question 6 (12 marks) STARE A NEW PAGE

Marks

- A crew of four rowers is to be chosen from five boys and six girls. How many different crews are possible if: 3
- there are no restrictions? ε
- the shortest girl and the tallest boy must be included? €
- Consider the graph of the function  $f(x) = \frac{1}{1+x^2}$ E

- Find the area bounded by this curve, the x axis and the two ordinates x = 0 and x = 1 using Simpson' Rule with three function values. Answer correct to 4 decimal places. ε
- Find the exact value of the area bounded by y = f(x), the x-axis and the two ordinates x = 0 and x = 1. €
- (iii) Hence find an approximation for  $\pi$  correct to 2 decimal places.
- Surveyors have marked out two points, A and B, in St Peter's St. The points are S2m apart and B is due east of A. Ē

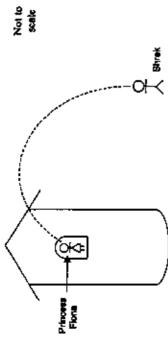

The bearings of A and B from the tallest point of the Great Hall are 230°T and 110°T respectively. The angles of elevation of the tallest point of the Great Hall from A and B are 30" and 60" respectively.

Show that the talkest point of the Great Hall is  $4\sqrt{39}$  m high.

ì

Higher School Certificate Trial Examination, 2004 Melhamatics Extension 1

- Find all the values of  $\theta$  for which  $\cos^2 \theta + \frac{\sqrt{3}}{2} \sin 2\theta = 0$ . 3
- Đ

Princess Fiona is locked up in a tower, 80m above the ground. To gain the attention of Sinek, Princess Fiona throws a lentil at an angle of elevation of  $\theta$ and an initial velocity of 50ms1.

- Derive the equations for the horizontal and vertical displacements of the lentil r seconds after it is thrown. (Use  $g = 10 \text{ms}^{-2}$ .) €,
- Shrek is 300m from the base of the tower when he is hit by the lentil. Find the values of the initial angle of projection,  $\theta$ , correct to the newest degree, if Shrek is 2m tell. €
