Abbotsleigh Ext | Tric' 2004 All questions are of equal value .- Fotal marks - 84 Attempt Questions 1-7

ÿ

Answer each question in a SEPARATE writing booklet. Extra booklets are available.

Question 1 (12 marks)

2

(a) Lise the table of standard integrals to eveluate $\int_0^{R_0} \frac{dc}{\sqrt{4 - x^2}}$

A is the point $\{3,-2\}$. B is the point $\{1,4\}$. Find the co-ordinates of the point P which divides AB externally in the ratio 5:2. 3

Express $\frac{X^*Y^*}{X^*}$ in the form $2^* \times 3^*$ if $X = \left(\frac{4}{3}\right)^*$, $Y = \left(\frac{9}{2}\right)^*$ end $Z = \left(\frac{3}{8}\right)^*$ S

Skelch the graph of $y=3\tan^{-1}\left(\frac{x}{2}\right)$ clearly showing the domain and range. ŧ

(e) Evaluate $\int_{-1}^{1} x(2\cdot x)^3 dx$ using the substitution $u=2\cdot x$.

Question 2 (12 merks) Start a new booklet

The equation $x^3 + 2x - 8 = 0$ has a root close to x = 1.6. Use one application of Newton's method to find a better approximation to the root. Ē

Find the coefficient of x^2 in the expansion of $\left(x + \frac{5}{x^2}\right)^2$ ē

Find sin bruck Ē

Express Gcos $x + 8\sin x$ in the form $A\cos(x-a)$, where a is in radians.

Î

Hence, or otherwise, solve the equation $6\cos x + 8\sin x = 5$ for $0 \le x \le 2\pi$

Ant 62 Raf & Adelphoratics This E.C.

Question 3 (12 merks) Start a new booklet

Marks

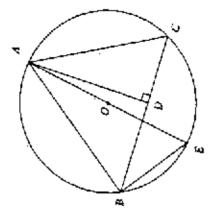

Write out the expension for $tas\{\alpha+\beta\}$

(ii) Hence evaluate exactly $\tan^{-1}(\frac{1}{4})$ $\tan^{-1}(\frac{3}{5})$

ABC is a triangle inscribed in a circle, centre O , and AB is drawn perpendicular to BC. ē

Copy or trace the diagram into your writing booklet.

Prove $\angle BAE = \angle DAC$

0.01 cm 1st ... Calculate the exact rate of change of its volume at the instant A aphere is expanding so that its surface area is increasing at the rale of when the radius is 5 cm. Ŷ

(d) Prove $\frac{\sin 2x}{1 + \cos 2x} = \tan x$

Question 4 (12 marks) Start a new booklet

Nark.

(a) A function f has the following properties for all positive real numbers a and b .

$$f(ab) = f(a) + f(b)$$

$$f(a^c) \approx cf(a)$$

$$f(2) = 5$$

$$f(5)=12$$

(b) Solve for
$$x$$
 in Eg, $x + \log_2(x-2) = 3$

(c) (i) Sketch
$$y = \log_x x$$
 and $y = 1 - x$ on the same diagram.

(ii) Hence or otherwise write down all values of
$$x$$
 for which

(d) Differentiate
$$x \tan^{-1} x$$
 and hence afrow that $\int_0^x \tan^{-1} x dx = \frac{\pi}{4} - \frac{1}{2} \log_x 2$

Question 5 (12 marks) Start a new booklet

Marks

(a) If α , β and γ are the roots of $2x^3-6x^4-4x+1=0$ find

(i)
$$\alpha\beta+\beta\gamma+\alpha\gamma$$

(H)
$$\alpha^2 + \beta^2 + y^2$$

(b) The population of sheep on a farm is given by the equation
$$\frac{dN}{dt} = i \left(N - 2000 \right)$$
 where N is the number of sheep at any time i and k is a constant. Initially there are 5000 sheep, and after 2 years there are 5000 sheep.

(i) Show that
$$N = 2000 + Ae^{it}$$
 is a solution of the differential equation.

Guestion 5 (12 marks) Start a new booklet

ŀ

(a) When saked to find $\int \frac{1}{2x} dx$ Mery did the following working:

$$\int \frac{1}{2x} dx \cdot \frac{1}{2} \int \frac{1}{x} dx$$

$$= \frac{1}{2} \log_{x} x + c$$

Louise attempted the came question with working shown below:

$$\int_{2x}^{1} dx = \frac{1}{2} \int_{2x}^{2} dx$$

$$= \frac{1}{2} \log_{x} 2x + k$$

Can they both be correct or is only one correct? Justify your answer.

- (b) Use mathematical induction to prove that $13 \times 6^{\circ} + 2$ is divisible by 5 for all n, where n is a positive integer.
- (c) Two points $P(6\mu,3\mu^2)$ and $Q(6q,3q^4)$ lie on the pareticle $x^2=12y$. The equation of the chord PQ is given by $y-\frac{1}{2}(p+q)x+3pq=0$. This chord passes through the fixed point (4,-3).

(i) Show that
$$3pq = 3 + 2(p + q)$$

- (ii) Show that the equation of the tangent to the parabola at P is $y=\mu x + 3 \rho^{2}$.
- (iii) Find the co-ordinates of the point of intersection I' of the tangents to the parabole of P and Q .
- (iv) Find the locus of T and describe il geometrically.

Question 7 (12 marks) Start a new booklet

Marks

Marks

(a) Evaluate
$$\lim_{x\to 0} \frac{\sin 3x}{7x}$$

 A gartide moves with acceleration # = 4x + 2 where x metros is the distance measured from the origin 0. Initially the particle is at the origin with velocity = 1 ms⁻¹.

i) Show that
$$v^2 = 4x^2 + 4x + 1$$

ii) Show that
$$x = \frac{1}{2} \left(e^{-x_2} - 1 \right)$$

- (iii) Describe the position of the particle as 1 increases Indefinitely.
- (c) Consider the geometric series

$$S = 1 + (1 + x) + (1 + x)^2 + + (1 + x)^4$$

(i) Write down the expersion of $(1+x)^r$

ii) Show that
$$S = \frac{(1+x)^{n^2}-1}{x}$$

(II) Hence, show that

$$\mathcal{S} = \binom{n+1}{1} + \binom{n+1}{2} \times + \dots + \binom{n+1}{r+1} x^r + \dots + \binom{n+1}{n+1} x^r$$
