

FORM VI

MATHEMATICS

Examination date

Wednesday 4th August 2004

Time allowed

3 hours (plus 5 minutes reading time)

Instructions

All ten questions may be attempted.

All ten questions are of equal value.

All necessary working must be shown.

Marks may not be awarded for careless or badly arranged work.

Approved calculators and templates may be used.

A list of standard integrals is provided at the end of the examination paper.

Collection

Write your candidate number clearly on each booklet.

Hand in the ten questions in a single well-ordered pile.

Hand in a booklet for each question, even if it has not been attempted.

If you use a second booklet for a question, place it inside the first.

Keep the printed examination paper and bring it to your next Mathematics lesson.

Checklist

SGS booklets: 10 per boy. A total of 1250 booklets should be sufficient.

Candidature: 109 boys.

Examiner

PKH

In the diagram above, ABCD is a quadrilateral:

- (i) Find the midpoint of the diagonal AC.
- (ii) Find the midpoint of the diagonal BD.
- (iii) Find the gradient of BD.
- (iv) Show that AC is perpendicular to BD.
- (v) What shape best describes quadrilateral ABCD? Give reasons.

SGS Trial 2004 Form VI Mathematics QUESTION THREE (12 marks) Use a separate writing booklet. Marks (a) Differentiate the following functions: (i) $y = \cos(2x + 1)$ 2 (ii) $y = \frac{x}{\log_e x}$ 2 (iii) $y = x^2 \tan x$ 2 (b) Sketch the parabola $x^2 = -4(y+2)$, showing its vertex and directrix. 3 (c) 3 6 In the diagram above, use the cosine rule to find the possible values of x. QUESTION FOUR (12 marks) Use a separate writing booklet. Marks (a) Find: (i) $\int_{0}^{\ln 2} e^{2x} dx$ 2 (ii) $\int \frac{2x}{x^2 + 5} dx$ 1 (b) Consider the arithmetic series $5 + 12 + 19 + \cdots + 292$.

(i) How many terms in the series?

(ii) Find the sum of the series.

(c) A particle moves in a straight line. At time t seconds, its displacement x metres from the origin is given by

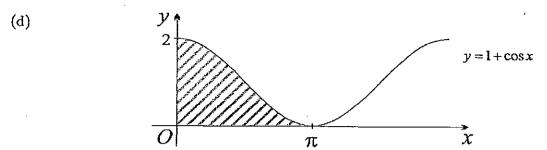

$$x = 8t - 2t^2.$$

(i) Sketch the graph of x as a function of t, showing the vertex.

(ii) Find the distance the particle travels in the first three seconds.

SGS Trial 2004 Form VI Mathematics Page 4

Find the shaded area in the diagram above.

QUESTION FIVE (12 marks) Use a separate writing booklet.

Marks

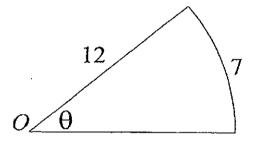

2

(a) Sketch the function $y = -2\sin x$, for $0 \le x \le 2\pi$.

2

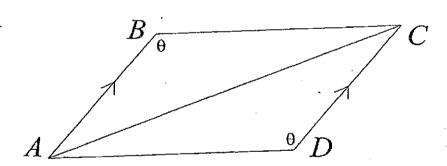

2

(b)

The sector drawn above has its centre at O. Find the size of angle θ , correct to the nearest degree.

(c)

In the diagram above, $AB \parallel DC$ and $\angle B = \angle D = \theta$.

(i) Prove that $\triangle ABC \equiv \triangle CDB$

2

(ii) Prove that the quadrilateral ABCD is a parallelogram.

3

(d) (i) Make x^2 the subject of $y = \sqrt{x-1}$.

1

(ii) Find the volume formed when the region between the curve $y = \sqrt{x-1}$ and the y-axis, from y = 0 to y = 3, is rotated about the y-axis.

SGS Trial 2004 Form VI Mathematics Page 5

QUESTION SIX (12 marks) Use a separate writing booklet.

Marks

(a) The derivative of a function is given by $\frac{dy}{dx} = \frac{1}{\sqrt{x}}$. Given that y = -2 when x = 4, find y as a function of x.

(i) Find the value of x in the diagram above.

(ii) Find θ , correct to the nearest degree.

(c) If $\log_a 5 = x$ and $\log_a 2 = y$, find $\log_a 400$ in terms of x and y.

- (d) (i) Copy and complete the table below for $y = \sqrt{2 + e^x}$, calculating each value correct to three decimal places.

\boldsymbol{x}	0	1	2
y			

(ii) Use Simpson's rule with three function values to approximate $\int \sqrt{2+e^x} dx$. Give your answer correct to two decimal places.

QUESTION SEVEN (12 marks) Use a separate writing booklet.

Marks

- (a) Consider the function $y = x^4 4x^3 + 3$.
 - (i) Find the stationary points and determine their nature.

- (ii) The curve has a point of inflexion where the tangent is not horizontal. Find the coordinates of this point.
- (iii) Sketch the function, showing all stationary points and points of inflexion.
- (b) For what values of k is the quadratic

$$kx^2 - 2x\sqrt{6} + k + 1$$

positive definite?

<u>QUESTION EIGHT</u> (12 marks) Use a separate writing booklet.

Marks

(a)

A particle is moving in a straight line with displacement measured from the origin. The graph drawn above shows the particle's velocity at time t. The particle is initially at the origin.

(i) When does the particle return to the origin?

(ii) Draw a graph of the displacement x against the time t.

(b) The population P of a growing town satisfies the equation

$$P = P_0 e^{kt}$$

where t is time in years.

The initial population is 22 000 and five years later the population is 27 000.

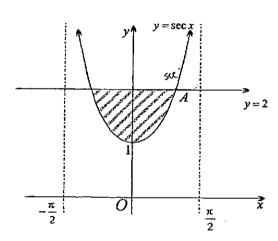

(i) Find P_0 and k.

3

(ii) When does the population reach 35 000? Give your answer correct to three significant figures.

2

(c)

(i) Find the x coordinate of point A in the diagram above.

(ii) Find the volume formed when the shaded area in the diagram above is rotated about the x axis.

QUESTION NINE (12 marks) Use a separate writing booklet.	/larl
(a) A vessel initially contains 100 litres. It is being emptied, and the rate of change of volume is	•
$\frac{dV}{dt} = -\left(2 + \frac{20}{t+1}\right)$	
where V is the volume in the vessel in litres after t minutes.	
(i) What is the initial rate $\frac{dV}{dt}$?	1
(ii) Find how many litres remain in the vessel after five minutes.	3
(b) A person borrows \$250000 from a bank at a reducible interest rate of 6% per annum, compounded monthly. The loan is to be repaid in equal monthly installments.	
Let M be the monthly payment. Let A_n be the amount owing at the end n months when the n th payment has just been made.	
The loan must be paid off after twenty years.	
(i) Show that the amount owing after three months is given by	2
$A_3 = 250000 \times (1.005)^3 - M(1 + 1.005 + 1.005^2).$	
(ii) Explain why $A_{240}=0$.	1
(iii) Find the value of M .	3
(iv) Suppose now that the person elects to pay \$2000 per month instead of the amount calculated in part (iii). How much more quickly would the person pay off the loan?	2

Exam continues overleaf ...

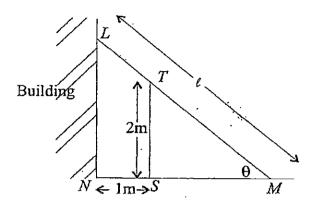

QUESTION TEN (12 marks) Use a separate writing booklet.

Marks

(a) (i) Show that the graph of $y = x^{\frac{2}{3}}$ is concave down for all values of x except for x = 0.

(ii) Solve
$$x^{\frac{2}{3}} \le \frac{x}{2}$$
.

(b)

The diagram above shows an extension ladder LM of variable length ℓ . The ladder leans against the wall of a building. It also touches the top of the fence ST, which is 2 metres high and stands 1 metre from the wall.

Let θ be the angle between the ladder and the horizontal ground.

(i) Show that
$$\ell = \frac{2}{\sin \theta} + \frac{1}{\cos \theta}$$
.

- (ii) Show that the stationary point of the graph of ℓ occurs when $\tan \theta = \sqrt[3]{2}$.
- (iii) For safety reasons, θ must lie between 55° and 70°. Find the minimum length of ℓ . Justify your answer.
