NAME\_\_\_\_\_

- Attempt ALL questions.
- ALL questions are of equal value.
- All necessary working should be shown in every question. Marks may be deducted for careless or badly arranged work.
- Board-approved calculators may be used.
- Each question attempted should be started on a new sheet. Write on one side of the paper only.

# **QUESTION ONE**

a) If  $3 \cot x = 4$ , find the value of

$$\frac{6 \sin x - 4 \cos x}{\cos ec \ x + \sec x} \qquad (x \text{ is acute})$$
 [2]

b) Evaluate 
$$\int_0^2 x e^{x^2} dx$$
 [2]

c) Differentiate 
$$x^3 \sin^{-1} 4x$$
 [2]

d) Given 
$$\log_a b = 0.3$$
 and  $\log_a c = 0.4$ , find  $\log_a \left(\frac{b}{c}\right) + \log_a ac$  [2]

e) Find the exact value of 
$$\cos 2x$$
 if  $\sin x = \sqrt{3} - 1$  [2]

f) A cosine curve has an amplitude of 5 and a period of  $3\pi$ . It has a minimum turning point at (0, 5). Find it's equation. [2]

## **QUESTION TWO**

a) Write down the domain of the function

$$y = \frac{1}{x^2 + 5x + 6} \tag{1}$$

- b) The roots of  $x^3 + 5x^2 + 8x + 2 = 0$  are  $\alpha, \beta, \text{and } \gamma$  [4]
  - i) Find  $(\alpha + 1) + (\beta + 1) + (\gamma + 1)$
  - ii) Find  $(\alpha+1)(\beta+1)(\gamma+1)$
- c) The half life of a radioactive substance is 24 hrs. How long will it take for only 15% of the substance to remain. (Assume  $M = M_o e^{-h}$  and give your answer to the nearest hour) [2]
- d) Find the equation of the tangent to the curve  $y = e^{\tan^{-1}x}$  at the point where it cuts the y-axis. [2]
- e) The area of the region below the curve  $y = e^{-x}$  and above the x-axis, between x = 0.5 and x = 1.5 is rotated about the x-axis. Find the volume of the solid generated. (Answer correct to 2 decimal places)

[3]

## **QUESTION THREE**

a) If 
$$\frac{dx}{dt} = 5(x-3)$$
 [3]

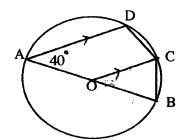

- i) Show that  $x = 3 + A e^{5t}$  is a solution, where A is a constant.
- ii) Find A if x = 20 when t = 0.
- b) [5] The points  $P(2ap, ap^2)$ ,  $Q(2aq, aq^2)$  lie on the parabola  $x^2 = 4ay$ .
  - i) If PQ passes through (4a,0) show that pq = 2(p+q)
  - ii) Hence find the locus of M, the mid point of PQ.
- c) Find the size of the acute angle between the lines y = -x and  $\sqrt{3}y = 2x$  (Answer to the nearest minute)
- d) Differentiate  $\log_e \left( \frac{3+x}{3-x} \right)$  [2]

# **QUESTION FOUR**

a) A right circular cone of vertical angle 60° is being filled with liquid. The depth of liquid in the cone is increasiong at a rate of 4cm/s. Find the rate of increase of the volume of the liquid in the cone when the depth is 9 cm.

- b) A projectile is fired at an angle of  $tan^{-1}(\frac{5}{12})$  to the horizontal with initial velocity 130 m/s. Using  $g=10 m/s^2$  [6]
  - i) Derive equations for the horizontal and vertical position of the projectile at time t.
- ii) What is the horizontal range of this projectile?
- c) AB is the diameter of the circle centre O. AD is parallel to OC, and angle BAD = 40°. Find the size of angle DCO, giving reasons. [3]

(figure not to scale)

# **QUESTION FIVE**

- a)
  i) Find the remainder when  $P(x) = x^3 (k+1)x^2 + kx + 12$  is divided by A(x) = x 3
  - ii) Find k if P(x) is divisible by A(x)
- iii) Find the zeros of P(x), for this value of k
- iv) Solve P(x) > 0
- b) It is known that  $\log_a x + \sin x = 0$  has one root close to x = 0.5. Use one application of Newton's method to obtain a better approximation of the root correct to 3 decimal places. [3]

# **QUESTION SIX**

- a) Show that  $7^n + 2$  is divisible by 3, for all positive integral n. [3]
- b) Find the general solution of  $\cos 2x = \sin x$  [3]
- c) Find the area bounded by the curve  $y = \frac{1}{\sqrt{25 x^2}}$ , the x axis and the ordinates at x = -2 and x = 2.

  (Answer correct to 2 decimal places)
- d) Differentiate  $\log_x (\sec x + \tan x)$  and hence find  $\int_0^{\frac{\pi}{4}} \sec x \, dx$ , in simplest exact form. [4]

# **QUESTION SEVEN**

- a)
  A Particle moving on a horizontal line has a velocity of v = 5given by  $v^2 = 64 4x^2 + 24x$ 
  - i) Prove that the motion is simple harmonic
  - ii) Find the centre of the motion
  - iii) Write down the period and amplitude of the motion
  - iv) Initially the particle is at the centre of the motion and moving to the left. Write down an expression for the displacement as a funtion of time.
- b)
  i) Write the expression for  $\sqrt{2}\cos\theta + \sin\theta$  in terms of t.
  (where  $t = \tan\frac{\theta}{2}$ )
  - ii) Hence or otherwise solve  $\sqrt{2}\cos\theta + \sin\theta = 1$  for  $0^{\circ} < \theta < 360^{\circ}$
- c) Find  $\int \frac{x \, dx}{(25 + x^2)^{\frac{3}{2}}}$  using the substitution  $x = 5 \tan \theta$  [3]
