## **NEWINGTON COLLEGE**

Trial Examination

# 12 MATHEMATICS

2003

# Extension 1

Time allowed: 2 hours (plus five minutes reading time)

#### DIRECTIONS TO CANDIDATES

- All questions may be attempted.
- In every question, show all necessary working.
- Marks may not be awarded for careless or badly arranged work.
- Approved silent calculators may be used.
- A table of standard integrals is provided for your convenience.
- The answers to the questions in this paper are to be returned in separate bundles clearly marked Question 1, Question 2, etc.
- Each bundle must show the candidate's computer number.
- The questions are not necessarily arranged in order of difficulty. Candidates are advised to read the whole paper carefully at the start of the examination.
- Unless otherwise stated, candidates should leave their answers in simplest exact form.

### Ouestion J 12 marks

marks

a) Differentiate  $\tan^{-1} \frac{x}{3}$ .

2

5

b) Evaluate:

6

- (i)  $\int_{1}^{\sqrt{2}} \frac{x}{\sqrt{4-x^2}} dx \text{ using the substitution } u = 4-x^2.$
- (ii)  $\int_{0}^{1} \sqrt{1-x^{2}} dx \text{ using the substitution } x = \sin \theta.$
- c) Solve the equation  $3\sin\theta + 4\cos\theta = 2.5$  for values of  $\theta$  between  $0^{\circ}$  and  $360^{\circ}$ . 4 Give your answer correct to the nearest minute.

### Ouestion 2 12 marks Start a New Booklet

- a) (i) Show that  $\frac{d}{dx} \left( \frac{1}{2} v^2 \right) = \frac{dv}{dt}$ .
  - (ii) The acceleration of a particle moving in a straight line is given by  $\ddot{x} = -2e^{-x}$  where x metres is the displacement from the origin. Initially, the particle is at the origin with velocity 2 ms<sup>-1</sup>.

    Prove that  $v = 2e^{-\frac{x}{2}}$ .
  - (iii) What happens to v as x increases without bound?
- b) (i) By considering the graph of  $y = e^x$ , show that the equation  $e^x + x + 1 = 0$  has only one real root and that this root is negative.
  - (ii) Taking x = -1.5 as a first approximation to this root, use one application of Newton's method to find a better approximation.
- c) In how many ways can the letters of the word GEOMETRY be arranged in a straight line if the vowels must occupy the 2nd, 4th and 6th places.

  (NOTE: The vowels in the English alphabet are the letters A, E, I, O, U).

Q3 ... Page 2

### Ouestion 3 12 marks Start a New Booklet marks a) Find the general solution for $\sqrt{3} \sin 2\theta = \cos 2\theta$ . 3 b) The region bounded by the curve $y = \sin x$ , the x-axis and the lines 3 $x = \frac{\pi}{12}$ and $x = \frac{\pi}{A}$ is rotated through one complete revolution about the x-axis. Find the volume of the solid so formed. c) Two points $P(2p, p^2)$ and $Q(2q, q^2)$ lie on the parabola $x^2 = 4y$ . 6 Show that the equation of the tangent to the parabola at P is $y = px - p^2$ . (ii) The tangent at P and the line through Q parallel to the y axis intersect at T. Find the coordinates of T. Write down the coordinates of M, the midpoint of PT. (iii) Determine the locus of M when pq = -1. (iv) Ovestion 4 12 marks Start a New Booklet a) If tan A and tan B are the roots of the equation $3x^2 - 5x - 1 = 0$ , find the value of tan(A + B). b) A particle is moving with simple harmonic motion. When it is at a distance d from the centre of motion, its speed is V. If its speed is $\frac{V}{2}$ when the distance from the centre is 2d, show that the period of the motion is $\frac{4\pi d}{V}$ and the amplitude is $d\sqrt{5}$ . c) The rate at which a body cools in air is assumed to be proportional to the difference between its temperature T and the constant temperature S of the surrounding air. This can be expressed by the differential equation $\frac{dT}{dt} = k(T-S)$ where t is the time in hours and k is a constant.

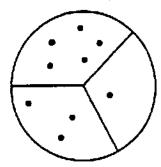

- Show that  $T = S + Be^{ht}$ , where B is a constant, is a solution of the (i) differential equation.
- (ii) A heated body cooks from 80 °C to 40 °C in 2 hours. The air temperature S around the body is 20 °C. Find the temperature of the body after one further hour has elapsed. Give your answer correct to the nearest degree.

O5 ... Page 3

### Ouestion 5 12 marks Start a New Booklet

marks

a) Nine points lie inside a circle. No three of the points are collinear. Five of the points lie in sector 1, three lie in sector 2, and the other point lies in sector 3.

- (i) Show that 84 triangles can be made using these points as vertices.
- (ii) One triangle is chosen at random from all the possible triangles. Find the probability that the vertices of the triangle chosen lie one in each sector.
- (iii) Find the probability that the vertices of the triangle chosen lie all in the same sector.
- b) Find the roots of the equation  $x^3 12x^2 + 12x + 80 = 0$  given that they are three consecutive terms in an Arithmetic Series.
- c) Consider the binomial expansion  $1 + \binom{n}{1}x + \binom{n}{2}x^2 + \ldots + \binom{n}{n}x^n = (1+x)^n$ .
  - (i) Show that  $1 \binom{n}{1} + \binom{n}{2} \ldots + (-1)^n \binom{n}{n} = 0$ .
  - (ii) Show that  $1 \frac{1}{2} \binom{n}{1} + \frac{1}{3} \binom{n}{2} \dots + (-1)^n \frac{1}{n+1} \binom{n}{n} = \frac{1}{n+1}$

### Ouestion 6 12 marks Start a New Booklet

- a) Colour-blindness affects 5% of all men. What is the probability that any random sample of 20 men should contain:
  - (i) no colour-blind men.
  - (ii) only one colour-blind man.
  - (iii) two or more colour-blind men.

Q6 cont. ... Page 4

#### marks

7

b) When  $(3 + 2r)^n$  is expanded in increasing powers of x, it is found that the coefficients of  $x^3$  and  $x^6$  have the same value. Find the value of n and show that the two coefficients mentioned are greater than all other coefficients in the expansion.

### Ouestion 7 12 marks Start a New Booklet

a) Prove by induction that  $2^3 + 4^3 + 6^3 + ... + (2n)^3 = 2n^2(n+1)^2$ .

A particle is projected with velocity  $V \, \text{ms}^{-1}$  from a point O at an angle of elevation  $\alpha$ . Axes Ox and Oy are taken horizontally and vertically through O. The particle just clears two vertical chimneys of height h meters at horizontal distances of p metres and q metres from O. The acceleration due to gravity is taken as  $10 \, \text{ms}^{-2}$  and air resistance if ignored.

- (i) Write down expressions for the horizontal displacement x and the vertical displacement y of the particle after time t seconds.
- (ii) Show that  $V^2 = \frac{5p^2(1 + \tan^2 \alpha)}{p \tan \alpha h}$ .
- (iii) Show that  $\tan \alpha = \frac{h(p+q)}{pq}$ .
